

NON TOXIC - ENVIRONMENTALLY FRIENDLY - CHEMICAL FREE

# KG Wash & Go Horse & Pet Range Chemical Free

**For Prevention and  
Remedy of Fleas,  
Mites, Ticks, Mange,  
and Skin Problems**

## TESTIMONIAL

*"This is the only product I have bought that actually does what it says on the tin, (plastic), bottle. My dog is so sensitive to almost all shampoo, and after a while they don't seem so good. But this one does the job and does not sting her eyes - although it says not to get near them. It is at the moment getting rid of her skin problems. It worked from day one in calming her skin, and has continued to clean and heal without any irritation".*

*Christine - Preston, England*

NON TOXIC - ENVIRONMENTALLY FRIENDLY - CHEMICAL FREE

## **Why and how to use the KG Horse & Pet Range, to remove most types of mites, fleas, ticks, germs and bacteria from your pet and your home.**

Insects are made up of a high concentration of protein. When **KG** is introduced to the insect, the enzymes act and can cause the insect to moult (shed its outer coating) prematurely, so eliminating the pest wherever they are, on your pet's body or in your living space. Poison pesticides attack the nervous system of the insect, which is not always effective.

University research has noted that some insects have developed a resistance to poison based products. Preformed enzymes are accepted in the field of pest cleaning as enzymes leave no toxic residues and the enzymatic effect on the insect exoskeleton is quick and safe.

**The KG Horse & Pet Range is Safe for all Pets, around Children, Gardens, Plants, and Ponds.**

### **CAUTION: Always Dilute Shampoo with water:**

Mix 100ml of KG shampoo/lotion to 700ml of warm water.

**EXTRA STRONG MIX 200ml to 600mls of warm water. Only use extra strong mix for severe infestations.**

### **BEST RESULTS WITH REGULAR USE!**

### **To shampoo and groom your horse and pet for mites, fleas & ticks:**

Stand your pet in a large container or tub. Wet hair with **KG mix** around neck and hind quarters first to prevent fleas travelling to those favourite hiding places. Then soak the remainder **KG mix** over the coat. Using a brush or your hands, gently massage **KG mix**, as you would a shampoo, over the entire body of your horse or pet and leave on for approximately 5 minutes or more - **NO NEED TO RINSE.** It is low lather as there are **No Chemicals** added to **KG range**.

- Repeat as often as is necessary to cover the coat.
- Rub down with a towel or allow to dry naturally whichever you prefer. **Take care to avoid eyes.**

## READY TO USE SPRAY

**KG Pet Spray will eliminate pests on contact.**

*“Good product, my cat would not stop scratching, it brought welcome relief and cleared up scabs, and now has a soft shiny coat, and has no toxic smell, nice to use.” Mrs Gill - Surrey*

*“Really pleased with this product. My French Bulldog had the mange so I used this daily as a spray to help kill the mites and bathed her weekly with it. The mange is difficult to get rid of. Now I spray her bedding daily to kill dust mites and control 'doggy smells'.” Miss A.K. Ashton Corsica - France*

**Note:** Unlike other poison flea remedies, **KG Range** is safe to use on foals, puppies or kittens.

Routinely monitor flea population levels, keep a log of your observations, & restrict your pet's access inside your home.

**For use as a non-toxic treatment for Dogs, Cats, Puppies, Kittens, Horse's & All Furry Pets:-**

### **Dog and Cat Owners Please Note**

When using **KG Pet Spray** add solution to a dish & use by soaking in the solution an old sock, put it onto your hand and groom over the coat of your pet. Combing your pet's fur to remove fleas as you go. Dip the comb into the solution to eradicate any live fleas on contact. Groom daily or as often as possible to achieve best result. We also suggest in between grooming to use Cedarcide Original for protection and to stop any re-infestation. Use daily behind the ears and around the neck, so as not to allow your pet to be able to lick it off. This product will repel any pests.

**PLEASE NOTE While your pet has fleas or mites DO NOT allow any pets into your bedroom as the eggs and larvae do not live on your pet only the adult feeds on the pet. Every 12 hours they hatch out and if they are on your carpet or bedding your pet will pick them up at night and be re-infested daily. Please read information provided on the life cycle of fleas.**

**KG Pet Spray will not fumigate your house of fleas.**

**KG spray mix** may also be applied to any affected area by spraying liberally. No need to rinse. Let the coat dry naturally. Repeat daily or as often as your pet itches an area.

- Spray over coat and bedding a few times every day
- Use as often as is necessary.
- Use a flea comb to comb the coat regularly.
- Dip the comb in diluted **KG Mix**. Comb through the coat.

- Allow up to 6 weeks to break the life cycle of the flea or mite or find the source of the infestation from bedding or other animals.
- Use a cotton pad to clear around ears and face very gently to avoid eyes.
- This may be repeated 3 times daily for elimination of ear mites.
- As with all products, please use caution and avoid eye contact.

### Washing your horse or pets blankets & bedding

Add 50ml **KG Horse Lotion or Pet Shampoo** to your washing machine compartment as water is running at a 60 degree wash. Dry the bedding on a hot tumble dry and mist spray over bedding daily for protection.

To kill fleas and mites or odours in stables, kennels and cattery's add 150mls shampoo or lotion to 5 Lt of very WARM water, and allow to dry naturally.

**KG Products** are safe around children, babies, elderly and mother's to be.

**KG Spray Solution** will clear any types of adult fleas and mites. When the **KG Solution** touches their bodies they naturally moult and die, stopping any more eggs being laid. How long this will take, cannot be guaranteed as only with your diligence and persistence can any pest be controlled or removed totally.

### **Pesticide FREE, NON - Toxic and Chemical FREE**

**Carpets and Upholstery - Suggested Dilution:**  
**100 ml of KG Solution to 700 ml of water**

#### **Carpets are the perfect flea environment!**

Steam clean or vacuum thoroughly every day for two weeks if you suspect flea infestation. This will remove dried blood, carpet fibres, debris, diluted excrement, flea larva and their silk, eggs, pupal cocoons, adults, faeces and other food sources.

Spray **KG** on and around carpets, rugs, baseboards and floors or use in a carpet cleaner machine. **KG** is safe to spray on furniture, if needed.

\*As with all cleaners, test **KG** on an inconspicuous spot for colour fastness. Rinsing or wiping with clean water may be necessary if heavy application is used.

*Below is a short overview to help you understand, the life cycle of any mites or fleas on your horses or pets and in your home, kennels or stable.*

**There are over 2,000 types of fleas in the world.**

The most common flea you will encounter attacking people and a pet is the cat flea. This flea feeds on cats, dogs, and humans, as well as rodents, chickens, opossums, raccoons, and other animals. The dog flea (*C. canis*) and the human flea (*Pulex irritans*) are less commonly encountered.

**Fact:** Two fleas entering a home can become 1 million in just 100 days!

**Fact:** A female flea can consume 15 times her body weight in blood daily.

**PLEASE READ THE FOLLOWING:**

Fleas go through three stages before they become adults (egg, larva and pupa). **It can take from 30 days to one year to complete this cycle.** The immature stages are most commonly found in areas where the host animal rests and visits frequently. Although eggs are laid on the animal, the eggs fall off and land on surfaces like carpets, furniture, pet bedding, etc. Larvae emerge from the eggs and feed on organic debris and adult flea faeces in the carpet or other surfaces.

The adult flea is the only stage routinely found on the animal. **Adult fleas will live 7-10 days. The average female flea will lay 150 eggs in that time span.** Unlike many other flea species, adult cat fleas remain on their host.

After mating and feeding, adult female fleas lay oval, white eggs. These smooth eggs easily fall from the host into cracks, crevices, carpet (the perfect flea environment), bedding or lawn covering.

Small, worm-like larvae (1/16 to 3/16 inches long) hatch from the eggs within 48 hours. They are eyeless, legless and sparsely covered with hairs. The larval body is translucent white with a dark coloured gut that can be seen through their skin.

They feed on adult flea faeces, consisting of relatively undigested blood, which dries and falls from the host's fur. They will also eat dandruff, skin flakes, and grain particles.

Larvae develop on the ground in areas protected from rainfall, irrigation and sunlight, where the relative humidity is at least 70% and the temperature is 21 to 32 C.

**This stage lasts 8 to 24 days,** depending on the temperature

and humidity. These immature fleas will eventually spin silken cocoons in which they will develop (pupate) into adult fleas.

Cocoons are sticky, attracting dirt and debris which will easily camouflage them. Under optimal conditions, new adults are ready to emerge from their cocoons within two weeks.

They can, however, remain in their cocoons up to 12 months in the absence of a host or in unfavourable climatic conditions. Vibrations and/or elevated temperature stimulate adults to emerge.

This ability of flea pupae to wait until a host arrives can result in a sudden increase of adult fleas when they emerge simultaneously from many accumulated flea pupae.

Adult fleas are about 1/16 to 1/8 inch long, dark reddish-brown, wingless, hard-bodied (difficult to crush between fingers), have three pairs of legs (strong legs that enable them to swiftly jump long distances) and are flattened vertically or side to side (bluegill or sunfish-like) allowing easy movement between the hair, fur or feathers of the host.

Fleas are excellent jumpers, leaping vertically up to 7 inches and horizontally 13 inches (an equivalent hop for a human would be 250 feet vertically and 450 feet horizontally).

## **There Are 4 Types Of Mange These Can Effect Your Pets and Humans too?**

**Demodectic Mange:** Demodectic Mange is also known as "Red Mange". This condition is caused by an overgrowth of *Demodex canis* mites within the hair follicles of the dog's coat. These mites live on ALL dogs! They are passed from mother to pups within the first weeks of life. (Unless cleared away) The trouble occurs when the population of mites grows out of control. Note : There is a human type of this mite. It slowly colonises the body over a long period of time from childhood.

**Sarcoptic Mange:** The mites burrow into the skin of the animal and lay their eggs. The scabies have a life-cycle of 17-21 days. This form of mange is **highly contagious** and can be passed between pets and humans.

**Cheyletiellosis:** Is also known as "Walking Dandruff". The *Cheyletiella yasguri* mite can actually be seen with the human eye, moving around the coat of the pet dog, cat or rabbit, hamster, and others. These mites have a life cycle of 21 days and are **very contagious**. They can be passed between animals as well as humans. This type of mange is usually found in shelters, boarding kennels and anywhere with a dense animal or human population.

**Ear Mites:** Ear Mites are considered a type of mange as they affect the external part of the ear. This condition is caused by an infection of the *Otodectes cynotis* mite. These mites are contagious and can be passed on to all other animals, but do not live on humans.

**KG Wash and Go** products are a natural holistic method of treating mites and will bring best results when used daily to protect and create a barrier against infestation.

**Daily use after walks or in close contact with other dogs is advised.**

To deal with mites we have recommendations from customers who after all the care that the vet could offer bought no solution to clear the mites. They inform us, using holistic **KG Pet Products** saved their pets from the misery of mites. By spraying the skin and coat it stops the itch and with their own diligence and persistence started the healing.

**Read Pippa Jones's testimonial on our website at [www.naturalenzymes.co.uk/pets](http://www.naturalenzymes.co.uk/pets)** to read her experience and the advice she gives to remove mites from your pets. In some of extreme cases a undiluted solution in small areas or a 2 to 6 dilution with warm water on areas that were difficult to remove the mites.

**We give no guarantees of complete removal** of any insects but relief of the scratching and itching and a near normal life can be obtained by forming a barrier with **KG Pet Products** which cause premature moulting in the insect and eradicate the mite by not allowing the pest to lay eggs and reproduce again daily.

**USE the same method of shampooing and spraying as with Fleas.**

**With natural products, commitment & regular use is required for best results**

## TESTIMONIALS

*"I dipped my comb in KG Pet Shampoo and combed through my cat's fur. It was instant death to every flea! The poison didn't even work. Whenever the enzyme touched the flea, they died.*

*'ll never be without this product."*

*JP - York, England*

*"Have spent the last 4 years at vets with my Shi-tzu re a skin condition. Lots of expense and nothing worked. Just browsing and came across this product thought would give it a try. OMG within the first use dog had reduced redness and scratching by half. Second application and even better condition.*

*My dog seems happier as well.*

*Will defiantly be getting some more. Thank you."*

*Sharon Whitehead - Kent*

## Yes! Baking Soda Can Kill Fleas Removing fleas from your home

- 1.If possible, put animals in a spot away from your treatment zone. or use at night when area can be left clear of use.
- 2.Sprinkle salt and **baking soda** liberally on your carpet, mattress or any affected area, and leave it overnight or all day if doing bedrooms to dehydrate the larvae and eggs which do not live on your pet. Always vacuum up later!

By mixing **baking soda and salt** into a formula you are making a dehydrating agent. This will dry out the **fleas**, their eggs, and the larvae. This will **kill** them off so that they do not reproduce and spread back to the coat of your pet via the adult taking a blood feed to produce more eggs on your carpet

**Caution – DO NOT** put this mixture on the pets coat - **salt can** also cause irritation and dryness on your **dog's** skin and yours so you must clean your home more often after use.

You may want to repeat this every 4 weeks to keep your home fresh and clear of fleas.

### How to get rid of fleas in your home.

- 1.Use a powerful vacuum on any floors, upholstery, and mattresses.....daily if need be!
- 2.Employ a steam cleaner for carpets and upholstery, including pet beds.
- 3.Wash all bedding, including your pet's, in hot water with **KG Wash & Go** concentrate 30ml per wash load
- 4.When going out for walks rub cedar products such as **Cedar Original** or **Tickshield** into areas of the coat to repel the adult flea at all times as you may be picking up fleas up from outdoors on your daily walks and close contact with other dogs – use these products as you would use perfume and rub or dab into spots you know the fleas attack your pet. spray hands and rub from behind the head and down to the tail and areas on paws and legs.
- 5.For small to medium pets, use **Cedar Original** - which has a weaker smell than **Tickshield**.

Never use on or around small pets/reptiles or birds also never use around bee hives.

Remove small animals and children from the room or area that you intend to use these products. Cedar naturally as a very strong smell and is very pungent to some people and small animals.

This product is flammable - **Caution** - do not spray near naked flames and dispose of the bottle safely.

**KG Pet Spray** is a natural product made from fruit enzymes such as pineapples it can be used safely at any time you see your pet itching and can be used continuously to spray on anything around your home and bedding – use daily to be sure to stop any adult fleas surviving.

It leaves no smell or residue and safe around all pets and children. Spray your pets coat leave to dry natural daily.

**DO NOT WASH IT OFF.**

Continue to use until all fleas are gone or as a preventive daily spray.

We advise you buy the **KG Wash and Go Shampoo** which you must dilute with water (CHECK LEAFLET for instructions) and re-fill your **KG Pet Spray** bottle saving you both money and plastic bottles and help with climate change pollution.

**KG Wash and Go Shampoo** can be used for many things around the home as a spray or as the concentrate, just add 30ml to a wash load to kill any insects, odours and grime from all bedding.

Spray this product safely anywhere you like to keep bacteria, grime and insects away.

## **Natural Enzymes Products** **Frequently asked Questions**

### **What is the difference between the KG Pet Spray and Cedarcide Original Spray?**

They are very different products, the **Cedarcide Original Spray** is an oil (Cedarcide & Silica oil) whereas the **KG Pet Spray** is a fruit enzymes spray, made from mostly pineapple, papaya, or kiwi fruits fermented for 6 months, it is not a pesticide poison.

The **KG Spray** can be used to help eliminate Mange (all types), Fleas, Ticks, Mites and Itchy Skin Problems. It can also be used to eliminate odours. It can be used as an air freshener and is effective on smoke, cooking, waste and other undesirable odours. The enzymes in the **KG Spray** act and cause the insect to moult (shed its outer coating) prematurely. It dissolves the insect's skin and it dies. It will not harm mammals as they regrow skin cells daily, so making it very gentle and safe for owners.

The **Cedarcide Original** is ideal for pest control, which include moths, fleas, ticks, ants, and other insects. It dehydrates, disrupts pheromones, suffocates and emulsifies most insects in all stages of life, from egg, larvae to adults stages. It can be used on pets, people and in the home. It dries quickly and will not stain. It has a fresh cedar scent - From the Red Cedar Tree. There are certain scents that insects hate, and that is cedar.

### **What is the difference between the Cedar Original and the Tickshield Spray?**

The **Tickshield Spray** should only be used on larger dogs over 20lbs. It is a more concentrated solution.

The **Cedarcide Original** has 10% Cedar oil and the **Tickshield** has 20% cedar oil.

**Tickshield** is a versatile cedar-based solution that is fast and effective on everything from general insect control to major infestations. It is an ideal choice for runners, hikers, campers, and others who are outdoors people. **Tickshield** kills on contact and repels fleas, ticks, mosquitoes, bed bugs, mites, ants, chiggers, flies, moths, and more. **Tickshield** dries quickly and will not stain. It's safe for people of all ages and larger animals.

### **Can I use both the KG Shampoo and the KG Spray?**

Yes, lots of our customers like to bathe their dogs using the **KG Shampoo** and use the spray before leaving the house, as an extra top up.

Please note that if your pet has a light coloured coat or has white fur and is sprayed with **KG Spray** daily over a long period of time, it may have a build up of fibres causing an orange tinge.

This will be from the pineapple fruit enzymes, please brush and groom to remove the fibres or wash with a standard pet shampoo, this will remove the pineapple fibres completely. Brush and groom your pet daily.

### **Can I use KG Spray on my kitten?**

**KG Spray** can be used on kittens that are 4 weeks +

For kittens - use the **KG Spray** as you would use a lotion on kittens. Spray onto an old sock and groom into the fur.

**TOP TIP** - DO NOT ALLOW THE KITTEN TO LICK IT OFF, distract for 10mins allow to dry naturally.

Be responsible, do not spray in the face and watch to see if the kitten licks it off, stop if you cannot control the situation by distracting the kitten until the product is dry and safe.

### **Can I use the KG Spray on my puppies?**

Yes, it is safe and gentle for young puppies after 4 weeks +, use in the same way as for a kitten. **KG Spray** can also be used around the mother as a room cleanser when nursing. In this instance use the **KG Spray** diluted 1 x 10 and it will still work in its diluted form to help to cleanse the skin of insects, grime, dead skin cells, bacteria along with body odours too.

### **Is it safe to use the KG spray if my dog likes to lick repeatedly?**

If licked continuously off by your pet (cat or dog), it will make them thirsty and have loose stools, as this is concentrated fruit, which in turn makes the product ineffective and waste of time, effort and money.

One option is to spray your dog prior to a walk so that your dog does not lick it immediately and allows the product to dry.

Alternatively you can use a protective collar which should be worn for 15 mins to allow the product to work, as once it is dry it's completed the task required.

### **Can I use the KG Spray on my dogs bedding and for cleansing an area?**

Yes you can use **KG Pet Products** to spray on all bedding as often as is needed on both your pets and your own bed, if your pet is allowed to sleep on your beds. Please do a patch test if using on fabrics and furniture. The **KG Spray** is very gentle and safe to leave on any bed with no smell. It can be used anywhere around the home or around children and other pets.

It can also be used to for cleaning purposes such as your pets cage. In this instance apply weekly, spray once the pet is out of the cage and allow the cage to dry completely. If treating for mange or fleas

infestations, **KG spray** can be used as a daily cleanse while the pet is out of the cage. Allow the area to dry naturally no need to rinse.

**TOP TIP** - If you need to dry the cage fast, use a hair dryer. But be careful as your pet's cage can get hot to the touch. Think before you dry!

**KG Wash and Go Shampoo** – Can also be used as a cleansing solution when diluted. For kennels and patio cleansing dilute **KG Wash and Go Shampoo** concentrate formula 1 x 15, and scrub or brush the area, leaving it to dry naturally, no need to rinse. **KG products** will still cleanse as a weaker strength but will take longer to work or kill an insect.

**TOP TIP** - A garden mist sprayer would be easy to use in this daily routine situation, around kennels and patio areas.

The **KG cleansing solution** is safe for your dog to walk in, if it is still wet.

Also, if cleaning indoor food areas, spray & leave for 3 mins and wipe away.

**KG Spray** can be used around food and meat to remove bacteria and grime safely. Please note that it should not be used around pet snakes or spiders.

### **Can I use Cedarcide Original Spray & KG Pet Spray at the same time?**

Yes you can use a diluted form of the **KG Spray** with the **Cedarcide** as a spot on at the same time.

For example if you have a cat with fleas, use the **Cedarcide** as a spot on for daily treatment to bring good results. Dab a spot behind their head and between their shoulders.

Along with **KG Pet Spray** diluted (as above, diluted 1 x 10) used as a lotion from a dish while grooming the cat, this will bring extra protection and not harm the cat's liver in any way.

Alternatively dip your flea comb in the **KG Pet Spray** solution and comb as often as possible.

These two products compliment each other well, if used in this way and are safe and effective when used alongside each other.

### **MORE ABOUT CEDARCIDE ORIGINAL**

#### **From what age can Cedarcide be used on puppies?**

It depends on size and breed along with their weight, but with consideration to be safe to cover the full body, leave until 4 months old. Or at 2 months, use as a spot on, a dab on the back of the head and around the shoulder's daily to protect.

#### **Is it safe to use the Cedarcide Original if my dog likes to lick his paws?**

Yes, as long as it is not, every time. As, this makes using the product wasteful and pointless, serving no purpose. Most pets adapt, to the product, and learn to choose not to lick. Watch and attend your pet on the first few applications.

If you find your pet licking it off too often or is concerned, then only apply to the rest of the body, but not the paws to

accommodate the pets' habit. The aim is to protect or prevent with the smell of cedar over the day.

### **Can I use Cedarcide Original on cats and small breed dogs?**

**Cedarcide Original** can be used in a natural method as a type of "spot on", to repel insect. Use each day by dabbing a small amount behind the pet's head and shoulders. This will serve as a preventive measure, while out of doors and around other animals.

### **I want to use Cedarcide on my dog as a preventative solution against fleas, how often should I apply it?**

If dogs over 4 months old, **Cedarcide** can be used as a preventive solution. For daily walking, apply before the walk either all over or just around the head and shoulders and along the back. Avoid the face and eyes.

### **What happens if I have both a cat and a dog are best friends?**

Some cats like to groom the family dog. Not in my house you're thinking! If you are considering which product to purchase, follow the guidelines already given, such as when using the **KG Spray** on a dog that likes to lick.

### **Can I use the Cedarcide Original Spray on my dogs bedding?**

It is best to avoid spraying pets bedding with **Cedarcide Original** because the smell of cedar can be irritating to sleep on. But if you wish to spray and leave away from the pet for 8 hours to kill insects that may be on the bed, then do so.

### **Which is best if we have an infestation?**

Both the **Tickshield Spray** and the **Cedarcide Original** can be used for an infestation of fleas, moths and other insects. Both will kill insects at all stages of life.

The **Tickshield Spray** is more concentrated and is more suitable for a major infestation.

The **Cedarcide Original** can be used as often as is needed but is dependent on any person's / pets situation. The aim of the product is to repel or kill the fleas. Three times a day if fighting fleas (for the first 2 weeks only) in the home, early morning, lunch 12pm, and early evening 6pm would be best, then twice daily and as often as needed to relieve or treat an area.

Each situation is very different, but a gentle spray or rub over every 6 hours is a good base to begin with. Avoid the face or eyes. If treating the home with either of these products, do a patch test near furniture and fabrics prior to treating a room. If spraying liberally it is best to keep your pets and people out of that area for 24 hours, as it will evaporate off textiles over 24 hour period.

Apply along skirting boards and places you feel you're bitten or seem likely to have eggs or larvae there.

When using natural products, it takes diligence in using the product weekly to eradicate all the life cycles of the pest for good. Keep checking, as the environment and situation can differ.

Be aware with very bad infestation's it may take up to 6 weeks to break the life cycle of the flea or mite.

## Cedarcide Original

Cedarcide Original is a safe, all natural, non-toxic insecticide made in the USA. Cedarcide Original is a versatile cedar-based solution that is fast and effective on everything from general insect control to major infestations. Cedarcide Original's quick-drying, non-staining formula makes it great for personal, pet and home use. It's safe for people and pets of all ages, and can be applied directly to the skin as a repellent. ## Cedarcide Flea & Tick Brush

The Cedarcide Flea & Tick Brush is the safest, easiest and most effective way to protect your dog or cat from fleas and ticks. Designed to dispense KG Pet Spray or all-natural Cedarcide Original insect repellent directly to your pet's skin, the Flea & Tick Brush penetrates even the thickest of furs to kill all hidden pests, while also providing protection against future infestation. Simply unscrew the handle lid, fill the Flea & Tick Brush with Cedarcide Original or KG Pet Spray, then gently groom your pet.

## **KG Wash & Go Dog Shampoo**

KG Dog Shampoo is natural and chemical free. It is effective in eliminating Mange (all types), Fleas, Ticks, Mites and Itchy Skin Problems that your Dog maybe suffering with.

Can be used for mothers to be and directly after giving birth to their litter. This is because all KG Pet Products are chemical free, pesticide free, non-toxic and environmentally friendly.

KG Dog Shampoo is made to be low lather as it contains no Soduim Larueth Sulphate as you would expect in your household and pet shampoos.

It is well known these can cause irritation to the skin.

KG Dog Shampoo is safe for your pet around babies, mothers to be and the elderly. Made from natural ingredients it is chemical free, pesticide free and bio-degradeable, so will not harm nature.

## **Biteback Ointment For Dogs**

A highly effective topical repellent cream for keeping your dog's skin calm and scab-free. Biteback Sweet Relief is formulated from gentle natural repellent ingredients that remove the causes of itching, thus calming and soothing the skin, keeping it healthy and the hair growing normally.

It also kills mites (a major cause of itching) and lice, if they are present.

## KG Pet Spray

KG Pet Spray is natural and chemical free. It is effective in eliminating Mange (all types), Fleas, Ticks, Mites and itchy skin problems that your Dog, Cat, Rabbit and other furry animals maybe suffering with.

Insects are made up of a high concentration of protein, so when KG Pet Spray is introduced to the insect, the enzymes act and cause the insect to moult (shed its outer coating) prematurely.

Enzymes leave no toxic residues and the enzymatic effect on the insect exoskeleton is quick and safe.

This product is not a pesticide and is totally safe for you and your pet. Use as often as is necessary to clear, prevent or protect from infestations after walking out or being around other animals. Non-staining and skin safe. KG Pet Spray is the diluted form of the KG Wash & Go Pet Shampoo.

## Cedarcide Tickshield Extra Strength

Tickshield is an all natural, non-toxic extra strength insecticide made in the USA. Tickshield is a versatile cedar-based solution that is fast and effective on everything from general insect control to major infestations. Tickshield is our strongest and longest-lasting formula, making it an ideal choice for hikers, campers and other outdoorsman. Tickshield dries quickly and will not stain. It's safe for people of all ages and larger animals.

Tickshield kills and repels fleas, ticks, mosquitoes, bed bugs, mites, ants, chiggers, flies, moths and more.

Made from 100% natural ingredients, Eco-friendly, Safe for children and pets, Kills insects in all stages of life, Ready-to-use, Fresh cedar aroma, Non-staining and skin safe.

Not to used around bees, small animals and birds.

## **KG Bird Spray**

KG Bird Spray for pest control, works better, quicker and safer than dangerous, synthetic pesticide poisons. KG Bird Spray can be safely used on the bird, their bedding and surrounding grounds.

Studies show that when fleas, mites and lice are no longer present on and around birds, they become less stressed and aggressive, allowing them to do what they do best; increase egg production and gain body weight. The elimination of parasites and insects will help decrease mortality rates in young birds. Safe for Chicken's, Pigeons, and all indoor birds.

## **KG Poultry Bird & Coop Wash**

KG Poultry Wash for coop and birds is a simple, easy and cost effective multi-purpose, all-in-one product with the power to clean away insects and the ability to eliminate odours.

It will assist you in eliminating bird mites and other insects while also breaking down faecal matter and odours which, in turn, helps to eradicate parasites that cause infant mortality in young birds.

KG Poultry Wash can be safely used on the bird, their bedding and surrounding grounds. KG Poultry Wash is a unique blend of enzymes formulated to act quickly and remain effective for long periods against unpleasant odours such as urine and faecal matter.

The molecular deodorants attack the malodours at the source. Ammonia, nitrogen and sulfur odours are eliminated immediately upon application.

## KG Pet Ear & Face Oil

KG Ears & Face Oil is specially formulated to ease the sensation of crawling mites on the face, ears, paws and claws to stop unnecessary damage to skin and fur from continuous scratching. It is a gentle but effective mixture of a 100 % natural hand pressed Anti-Microbial organic nut oil safe for animals which is blended with a natural blend of plant enzymes.

Wipe onto the face, nose areas and around the eyes and ears safely. Very effective on the paws and claws. It will ease the sensation of the crawling of mites on the face and ears to stop itching and damaging the skin or coat and stop any loss of fur while decreasing mange mites, bird mites and harvest mites that like to live in these areas. Also very effective against skin fungus and ear fungus along with dry skin problems when used daily.

## Dyna Powder

Dyna Powder is a food grade DE powder used by humans for health benefits, but many people now feed Dyna Powder to their pets, as the health benefits of this natural product have shown to be very effective, showing improvements in the body and coat of their pets. Dyna Powder works well with the KG Pet Range to kill internally parasites while being easy to brush into your pets coat, to fight against fleas and mites infestation. Great for use in those places you don't go to daily, such as sheds, lofts, kennels, and car boots, which gives added protection from pests in those places.

## **KG Horse Grooming Lotion**

KG Horse Grooming Lotion is a revolutionary formula designed to assist in removing and eliminating mange, harvest mites, fleas, sweet itch and skin problems that your horse may have contracted. KG Horse Grooming Lotion plus the handy spray bottle is a 2 in 1 product which can be used as a grooming lotion or as a spray to groom daily or clean and protect your horse's stable and tack. Can be used for mothers to be or directly after giving birth, also foals from birth. All KG Pet Products are chemical free, pesticide free, non-toxic and environmentally friendly. KG Horse Grooming Lotion contains no Sodium Larueth Sulphate that you might find in other horse shampoos or lotions. It is well known that this can cause irritation to the skin. The benefits of using KG Horse Grooming Lotion are - it gives fast effect relief; does not harm and is safe to use on your horse; saves you money on vets bills. The most superior **NON-TOXIC REMEDY** on the market today!

## **KG Guinea Pig Spray**

KG Guinea Pig and all small furry animals.

KG Guinea Pig Spray is natural and chemical free.

It is effective in eliminating Fleas, Ticks, Mites and some itchy skin problems, that your Guinea Pig, Hamster, Gerbil, Mice and other small animals may suffer from.

## X-Thrush Hoof Thrush Remedy

X-Thrush neutralizes and kills bacteria and fungi that causes Thrush. Does not stain. Does not sting, also will not dry out the hoof. Promotes healthy tissue growth. Contains only natural ingredients. Horse thrush is caused by anaerobic bacteria, when trapped in moisture it can create a fungal infection. Thrush can create some mild discomfort, but as long as it is addressed quickly it rarely does anything more. Left unnoticed for a period of time, thrush can make its way into the sensitive areas of the hoof, often creating some bleeding. A hoof that is affected with thrush will exhibit soreness, black pus as well as a scent that can send a grown man crying.

## Dr Bens Ear Neutraliser

Dr. Ben's Ear-Neutralizer is an effective ear treatment solution that will neutralize and help clear-up outer and deep ear infections including ear mites.

Ear-Neutralizer contains natural antibacterial, antifungal properties which promotes healthy ears.

It is highly effective in neutralizing & cleansing yeast infections, oozing ears, stinky ears and killing ear mites.
